# General

## Firmware version

For a given firmware tag **VXY-ZK**:

- ❖ Usercode is **XYZKdbdb**
- ❖ Firmware version read via "R 4024" is **XYZK**

## VME access through the board discrete "emergency" logic

The FPGA may be accessed via JTAG through the discrete logic as follows

- ❖ The VME address is 0xFFFC
- ❖ The bit 0 of the data sent is TMS
- ❖ The bit 1 of the data sent is TDI

For example, to read the Usercode, starting from JTAG idle (five TMS = 1 & one TMS = 0), the commands are:

```

W FFFC 1 To Select-DR-Scan
W FFFC 1 To Select-IR-Scan
W FFFC 0 To Capture-IR
W FFFC 0 To Shift-IR

W FFFC 0 Shifting IR (Read UserCode IR = 3C8)
W FFFC 0 Shifting IR
W FFFC 0 Shifting IR
W FFFC 2 Shifting IR
W FFFC 0 Shifting IR
W FFFC 0 Shifting IR
W FFFC 2 Shifting IR
W FFFC 2 Shifting IR
W FFFC 2 Shifting IR
W FFFC 3 Shifting IR and to Exit1-IR

W FFFC 1 To Update-IR
W FFFC 0 To Run_Test/Idle
W FFFC 1 To Select-DR-Scan
W FFFC 0 To Capture-DR

W FFFC 0 Shifting DR
R FFFC 0 Shifting DR (Read bit 0 of UserCode)

```

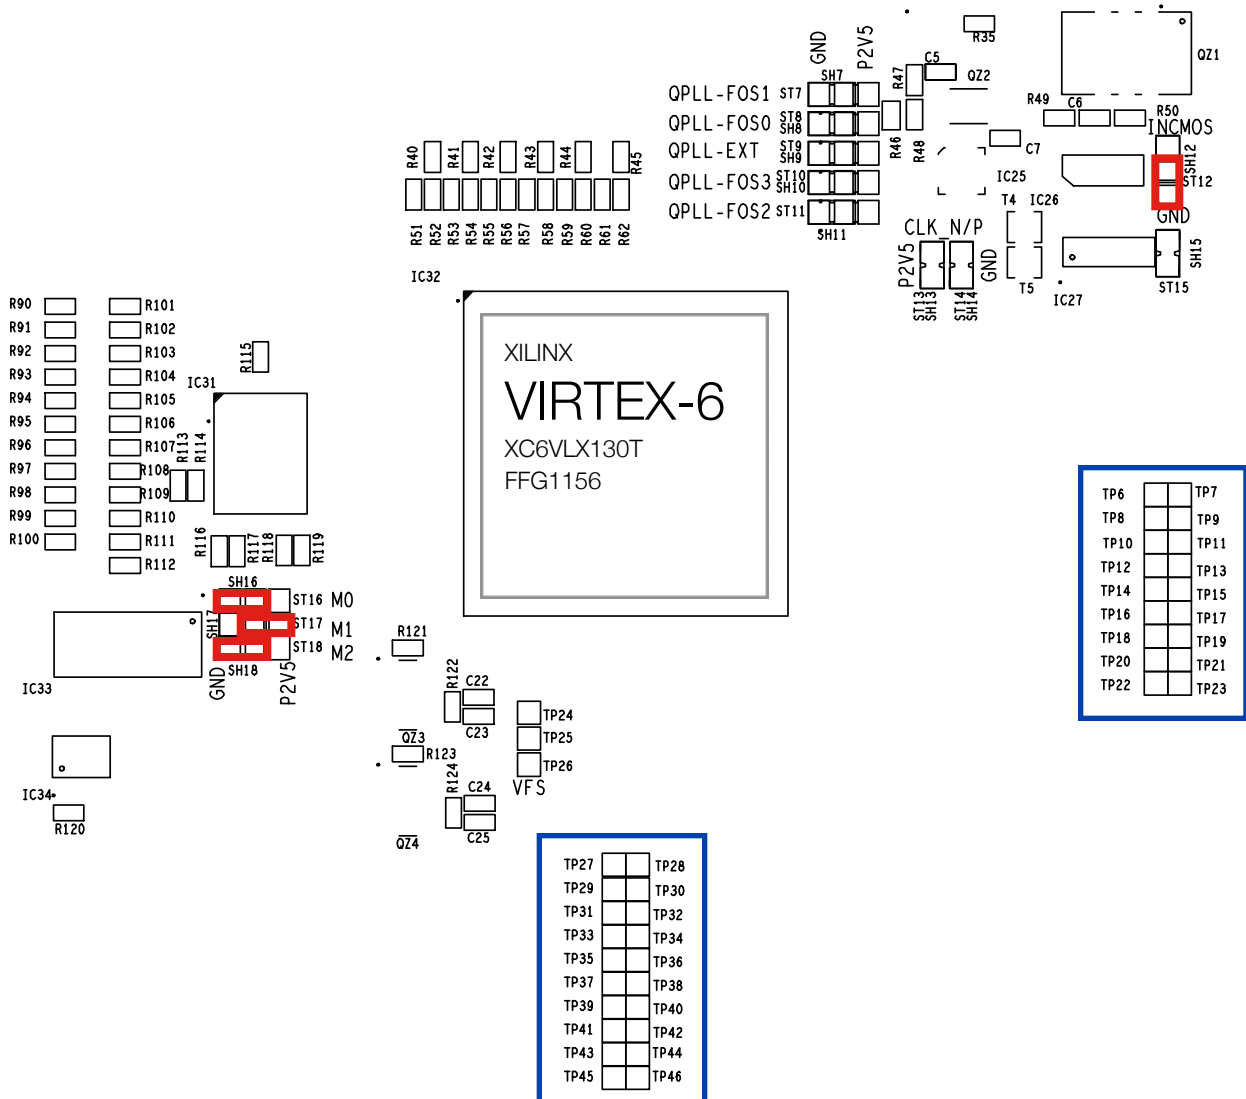

Since the Usercode register is 32 bits, the last two commands should be repeated 31 more times.

## Jumpers and test points

Place the **jumpers** marked in **red** in the diagram: M[2:0] = 010, and ST12 grounded to use clock from CCB.

The signals sent to the **test points** marked in **blue** are:

R 7160	P1V0: voltage level for FPGA
R 7170	P5V_LVMB: voltage level for LVMB

## Translation into temperatures and voltages

The output of the 7YZ0 commands is a 12-bit number that we call  $R_{YZ}$ . The measurement is:

- The FPGA temperature is  $T_{\text{FPGA}} = \frac{R_{00} \times 503.975}{4096} - 273.15$  [ $^{\circ}\text{C}$ ]
- The temperature of the thermistors THERM1, THERM2 is given by

$R_{XY}$	377	455	55A	687	7DD	959	AF8	CB5	E87	FFF
$T$ [ $^{\circ}\text{C}$ ]	15	20	25	30	35	40	45	50	55	60

- The voltage levels are  $V_{YZ} = \frac{R_{YZ}}{2048} \times V_{YZ, \text{Nom}}$  [V], where  $V_{YZ, \text{Nom}}$  is the nominal voltage level for that register. That is,  $V_{10, \text{Nom}} = V_{13, \text{Nom}} = 3.3\text{V}$ ,  $V_{11, \text{Nom}} = V_{17, \text{Nom}} = 5\text{V}$ ,  $V_{14, \text{Nom}} = 2.5\text{V}$ , and  $V_{16, \text{Nom}} = 1\text{V}$ .
